Rynke Points

How to collect your Rynke for the Tour de Paris
Team Rynkeby Europe
As of November 2026

Together to Paris

We ride to Paris as a team. We start together, we ride together, and we arrive together.

On the Tour, nobody gets left behind. We wait for each other: on the climb, after a puncture, when someone is having a bad day. That is our promise to everyone on the team.

For this promise to hold, everyone needs one thing: **a minimum level of fitness**. Starting badly prepared doesn't only slow you down, it slows down the whole team:

- **Everyone rides slower.** The team is only as fast as its slowest riders. Every stage takes longer, for everyone.
- **The days get long.** More hours in the saddle, less recovery. Breaks and arrival move back, and support vehicles and helpers wait too.
- **Fatigue is dangerous.** Riding at your limit means riding without focus. In a tight group that puts not only you at risk but everyone around you.
- **Others carry the load.** Whoever can't keep up has to be pulled, pushed or put in the support vehicle. That strength is then missing for the others.
- **The mood suffers.** Paris should be an experience for everyone, not a week of waiting and gritting your teeth.

That's what the Rynke are for. The minimums aren't there to make life hard. They make sure that all of us can manage the route day after day under our own power.

> **You're not only training for yourself. You're training for the team.**
>
> Every kilometre you ride now is a kilometre nobody has to ride for you on the Tour.

What is it about?

Everyone who rides with us on the Tour de Paris should be well prepared, on the bike and as a team. To show this, you collect **Rynke** over the season. There are two kinds:

- **Training Rynke** you get for cycling: for kilometres, elevation and for training together.
- **Team Rynke** you get only for team events: team training sessions, training weekends and technique sessions.

What do I need for the Tour?

I'm in with	Training Rynke	Team Rynke
at least	**250**	**25**

You need **both**. Extra Training Rynke don't make up for missing Team Rynke, and the other way round. With 400 Training Rynke and 20 Team Rynke you're not in yet.

Also, at most one third of the 250 Training Rynke may come from virtual rides (see "Virtual rides").

How you get Rynke

For	Team Rynke	Training Rynke
every full 10 km of a ride	–	1
every full 1000 m of elevation (season)	–	5
1 team training session	1	5
1 day of a training weekend	5	10
1 technique session	5	5

Kilometres and elevation

Kilometres and elevation are counted differently.

Kilometres count for each ride you upload to Strava, one by one. RynkePoints rounds **each ride down on its own**: every **full 10 km** of a ride gives 1 Training Rynke. Whatever goes beyond the last full 10 km is lost. It is **not** added to other rides. That's on purpose: we want proper long rides, not many short ones.

Elevation, on the other hand, is **never lost**. RynkePoints adds up the elevation of all your rides in the season. Every **full 1000 m** in total gives 5 Training Rynke. Whatever isn't enough for the next 1000 yet stays and keeps counting with your next rides.

Ride(s)	Training Rynke	Why
79 km	7	the last 9 km are lost
100 km	10	
3 rides of 7 km each	0	each ride under 10 km
2 rides of 25 km each	4	2 + 2, not 50 km = 5
1999 m of elevation in one ride	5	1 full 1000, 999 m stay
2 rides of 600 m elevation each	5	1200 m together, 200 m stay
1999 + 1 m elevation in 2 rides	10	2000 m together
79 km with 1999 m of elevation	12	7 for km + 5 for elevation

One ride, one recording

A ride doesn't count **at all** if your breaks together last **longer than your moving time**, that is, more than half of the whole recording. Moving time is the time you were moving. Then there are no Rynke for its kilometres or its elevation, and its elevation doesn't count towards your season total either. If you ride for 4 hours, your breaks can add up to 4 hours at most.

Recording	Moving time	Breaks	Training Rynke
150 km with a coffee stop and a lunch break	6 h	2 h	15
100 km with a long café stop	4 h	3 h	10
150 km, breaks exactly as long as the moving time	6 h	6 h	15
100 km with a very long café stop	4 h	5 h	0
600 km overnight	24 h	6 h	60
To work and back, 40 km, one recording	2 h	7 h	0
all rides of a week as one recording	10 h	150 h	0

How long a ride takes in total doesn't matter: rides overnight count too, as long as the breaks are short enough.

So you get the most if you upload each ride as **exactly one** recording:

- If you split a long ride into several recordings, the leftover kilometres are lost several times. (Elevation isn't lost that way.)
- If you put several rides into one recording, it usually doesn't count at all because of the breaks.

Rides that don't count because of too long a break are shown on your RynkePoints page with this note.

We brought in this break rule so that nobody games the system. If it leads to unfair situations, we'll change it.

What doesn’t count

These recordings bring no Rynke, neither for kilometres nor for elevation:

- **Rides flagged by Strava.** If Strava has flagged a ride (it then doesn’t count for club leaderboards or segment records either), it never counts with us, whatever the reason. If you think the flag is wrong, settle it with Strava; once it is lifted, the ride is counted by the other rules.
- **Manually entered activities.** What you enter on Strava by hand instead of recording it doesn’t count. That’s also true if your bike computer failed; in that case, talk to the organisers (see “Corrections”).
- **E-bike and e-mountain bike rides.**
- **Rides too slow or too fast.** If your average (distance divided by moving time) is **below 10 km/h** or **above 45 km/h**, that wasn’t a bike ride but more likely a walk or a trip by car or train.
- **Climbing too fast.** Nobody manages more than **1500 m of elevation per hour of moving time** over a whole ride under their own power. That was a cable car or a lift.
- **Duplicate recordings.** If you recorded the same ride more than once (say, with a bike computer and a phone), the recordings overlap in time. Then only the **longest** one counts. Rides that don’t overlap in time all count.

Recording	Training Rynke	Why
80 km on a bike computer, 78 km on a phone, same time	8	only the longer one counts
300 km in 4 h moving time (train)	0	average 75 km/h
15 km in 2 h moving time (walk)	0	average 7.5 km/h
20 km in 2 h moving time	2	average of exactly 10 km/h counts
30 km and 2000 m elevation in 1 h moving time (cable car)	0	2000 m of elevation per hour
200 km entered by hand	0	entered manually
100 km on an e-bike	0	e-bike
100 km, flagged by Strava	0	flagged by Strava

If this hits an honest ride, for example because a GPS glitch pushes your average up or a mountain bike ride was very slow: correct the ride on Strava (for example, crop out the glitch) or talk to the organisers. On your RynkePoints page you see the reason for every ride that doesn’t count.

All other bike rides that RynkePoints takes over from Strava count, including gravel, mountain bike and virtual rides. Running, swimming and other sports don’t count.

Virtual rides (Zwift & co.)

Rides on an indoor trainer count as normal, with Zwift or similar apps just as without. A virtual ride is any ride that Strava marks as a virtual ride or as an indoor trainer ride. For the Tour, though: **at most**

one third of the 250 Training Rynke may come from virtual rides. So you need at least **167 Training Rynke** from rides outdoors, team events and corrections. Whatever you collect virtually beyond that stays in your total, but on its own it won't get you to Paris.

Training Rynke	of which virtual	without virtual	In with 25 Team Rynke?
260	100	160	no, 7 without virtual are missing
250	80	170	yes

Set your real body weight!

In Zwift and similar apps, your speed depends directly on the body weight you enter. Enter a few kilos less and you ride faster and further for the same effort, and so collect more Rynke. **That's cheating.**

Enter your **real, current body weight**: not the weight you'd like to have, and not last summer's. The same goes for your height and for the settings of your indoor trainer and power meter.

RynkePoints can't check this. We rely on you. Cheating here doesn't cheat the app, it cheats the team: the people you're riding to Paris with, and everyone who collected honestly. And on the way to Paris, no false weight will ride you up the hill.

Team events

After each team event, the organisers record who was there. Only this record counts. RynkePoints does **not** recognise your attendance from your ride. So you get the Rynke for an event even if you didn't record it on Strava, for example at a technique session.

- A **training weekend** counts **per day**: two days there give 10 Team Rynke and 20 Training Rynke.
- Each event counts for you at most once.

Rides at team events count on top

If you ride at a team training session and upload the ride to Strava, you get **both**: the fixed Rynke for the event and the Rynke for the kilometres and elevation of your ride.

> Example: team training session, 60 km, 1000 m of elevation
>
> - Team training session: 1 Team Rynke + 5 Training Rynke
> - 60 km: 6 Training Rynke
> - 1000 m of elevation: 5 Training Rynke
>
> **Result: 1 Team Rynke and 16 Training Rynke**

You get Team Rynke only through team events. Riding alone brings only Training Rynke.

Which rides count?

- Only rides and events **from the start of the season**. If the organisers have set a **deadline**, nothing that takes place after it counts any more.
- What matters is the ride's start date in your time zone.
- If you change a ride on Strava (for example its route) or delete it, RynkePoints recalculates your Rynke.
- If you uploaded the same ride twice (say, from your bike computer and your phone), only the longer recording counts (see "What doesn't count").

Corrections

If something isn't right, for example your name is missing from a team event, talk to the organisers. They can correct your Rynke, giving a reason. The correction stays, even when RynkePoints recalculates your Rynke.

Where do I see my total?

On your RynkePoints page you see your Training Rynke and Team Rynke, how many you're still missing, whether you're in, and where your Rynke come from. There you also see your elevation for the season and how much is missing for the next 5 Training Rynke, and, if you ride virtually, how many Training Rynke you have without virtual rides. Only you see your total.

Do the rules change?

Yes, that can happen during the season. Then RynkePoints recalculates all Rynke of the **whole season retroactively** under the new rules, including for rides you uploaded before the change. So someone who had enough before may fall below afterwards, and the other way round. The organisers' corrections are kept.

On your RynkePoints page you see since when the current rules apply. We announce changes in good time.
